## Preface [1990 publication]

This dictionary is divided into three major subdivisions. The first is an alphabetical Dadibi-first listing of common words and phrases. A Tok Pisin and English meaning is given in most cases. This section is intended to be valuable for the Dadibi speaking students of the Tokples and Community Schools.

The second major subdivision is arranged by topics so it will be easier for an English or Tok Pisin speaker to find Dadibi words or expressions. The first two topics are simply MISCELLANEOUS THINGS and VERBS. Following these two categories are a number of topics listed alphabetically. WILD LIFE and BIRD NAMES are included as the last two topics.

The third major subdivision contains some basic grammar ideas from the Dadibi language. It should help to get an elementary understanding of how the verbs and the noun phrases work in the language. It is, however, far from comprehensive in its scope.

This dictionary is a preliminary document and will be used to solicit feedback for a more thorough set of dictionaries to follow. We would expect to have an English-first and a Dadibi-first book and to include more exemplary information of word and phrase usage.

## Note to the 2008 edition

This publication, prepared for the web, differs in some ways from the original printed version. Part 1 consists of a full Dadibi-English wordlist, which merges information from the first and second subsections of the original. Part 2 is the original second subdivision, which lists a number of Dadibi words arranged by semantic domains. This is followed by part 3, an English-Dadibi finderlist, which was not part of the original. Part 4 finally is the original third subdivision, outlining some basic grammatical features of the language.

The accented vowels in the wordlists represent nasalised vowels; in the 1990 edition nasalisation was indicated by subscript dots.

| <b>haga</b>  | Tahitian chestnut. <i>Tok Pisin:</i> galip. From Daba Hasanugiai, Nov. 1979. In the case of a haga nut tree, which isexpected to bear after 2 years, i.e., in 3rd season, owner will cut ; chop iton the base, not cutting it down but damaging it, in order to make it bear the next season. Idea seems to be to stunt the growth of the tree itself in order to force nut production. One idea is to let out "bad blood" of the tree. The technique is also said to be usable on siga trees. |

## **Part 4**

# **Dadibi Language Usage Helps**

## **General**

The verb in Dadibi is at the end of the clause or end of the sentence. Final clauses in sentences usually carry the tense or aspect information. A different series of verb forms (without tense information) are used in clauses which are medial in a sentence. Simple sentences with only one clause have final verb forms.

### **Primary verb forms (final clause forms)**

|         |  |
|---------|--|
| -bo     | gerund form, sometimes present tense                   |
| -bao    | present to near future                                 |
| -aibao  | future tense   |
| -ao     | imperative, command form                               |
| -ali    | near past tense, (not always a time oriented nearness) |
| -ai     | past tense   |
| -bo dao | customarily  |
| -ai dao | completed  |

### **Primary verb form examples**
