EDITOR'S NOTE

Tagmemic and Matrix Linguistics Applied to Selected African Languages was published in November 1966 in limited edition as the Final Report of Contract no. OE-5-14-065 with the Office of Education, U.S. Department of Health, Education, and Welfare. It is republished here in corrected form and with some of the original appendices omitted. It is intended that the publication of this material as a volume of the Summer Institute of Linguistics Publications in Linguistics and Related Fields will give it the wider distribution that it deserves. Students of African languages will find here a wealth of data and stimulating discussion that will, hopefully, lead to further study and research on a wide variety of linguistic topics. Those concerned with general linguistic theory will find concrete examples of the application of tagmemic and matrix principles developed by the author.
